

Metering precision

Provides greater measurement accuracy in:

- Check Metering
- Power Station Fuel Gas Measurement
- Refinery and Process Measurement
- Compressor Fuel Gas Measurement
- Production Allocation Metering

Regardless of the application, the accuracy of your meter in secondary measurement is critical.

Ever-increasing industry demand for greater accuracy and accountability has driven the development of the CheckMeter™ from Savant Measurement.

The CheckMeter's unique design uses three components that work together to achieve accuracy that is proven to be 3 to 4 times that of any competitive meter.

Fluid enters the CheckMeter through a specially designed flow corrector. Then it passes to the core where Savant's patented isolating flow conditioner perfects the flow profile of the fluid. The repeatable, predictable flow profile presents itself to the measuring element, a new design of a true averaging Pitot tube. The result: a new level of performance in precision metering.

When your profits are measured by precision, count on Savant Measurement. We bring precision to the bottom line.
