

### **Aggreko Powers Permian Basin and Supports Local Utilities with Opening of New Service Center in Carlsbad, New Mexico**

**Houston, TX:** Aggreko, a global leader in [temporary power generation](#), [temperature control](#) and [oil-free compressed air solutions](#), announced today the opening of a new service center in Carlsbad, New Mexico to meet the growing demand for temporary utility services in the oil and gas, mining, utility, petrochemical and refining industries. Backed by a nationwide network of service centers, the facility maintains the full complement of Aggreko's equipment, services and support. The center sits on a two acre lot to allow for a wide-array of inventory to meet both long-term and emergency requirements.

"The growth of activity in the Permian Basin has prompted a need for more readily available and accessible power sources, not only to support oil and gas production, but also to support utilities where the added strain on the grid puts local communities at risk for unexpected outages," said John Morgan, Vice President, West Area General Manager, Aggreko North America. "With this new facility, we are better positioned to service our clients with faster turnarounds and maintain our commitment to providing reliable, cost-effective and scalable power solutions."

The ripple effect from the boom in shale activity has also prompted a higher demand for more cost-effective natural gas-powered generators to address flaring concerns and reduce emissions. With Aggreko's fleet of natural gas [generators](#) and gas cleaning applications, operators in the Permian Basin will be able to leverage on-site alternative fuels to power operations, reducing their environmental impact and maximizing revenue. Customers will also benefit from Aggreko's Remote Monitoring (ARM) service, which transmits real-time data from equipment, allowing Aggreko to anticipate, diagnose and solve problems faster and with greater accuracy — and proactively head off potential issues.

Customers can also expect to take advantage of Aggreko's specialized service teams. Aggreko Process Services (APS) is an experienced process engineering team that helps customers improve their processes and operations to enhance bottom-line performance and address environmental concerns. Aggreko Cooling Tower Services (ACTS) focuses on improving cooling water performance and reliability through temporary cooling tower installations. Unique to the rental industry, APS and ACTS can design, install and provide technical support and maintenance at extremely short notice.

Aggreko's new facility is open for business and located at 5321 Sierra District, Carlsbad, NM. For more information visit [us.aggreko.com](http://us.aggreko.com).

## EDITOR'S NOTES

Aggreko plc is the world leader in the supply of temporary power and temperature control solutions. Aggreko employs over 6,000 people operating from 202 locations. In 2013 we served customers in about 100 countries, and had revenues of approximately GBP 1.6bn (USD 2.5bn or Euros 1.9bn). Aggreko plc is listed on the London Stock Exchange (AGK.L), is a member of the FTSE-100 index, and is headquartered in Scotland. For more information, please visit the company website at [www.aggreko.com](http://www.aggreko.com)

Aggreko provides power and temperature control solutions to customers who need them either very quickly, or for a short or indeterminate length of time. Examples would be the supply of power to an industrial site which needs to service its permanent power supply, supplying a whole city in times of power shortage, or providing a major sporting event with power and cooling systems. We serve our customers either through our 202 service centres, which we call the Local business, or globally through our Power Projects business.

In the Local business, which accounts for about half of our revenues, we hire our equipment to customers, who then operate it for themselves, although we retain responsibility for servicing and maintaining it. In the Power Projects business, which also accounts for about half of our revenues, we operate as a power producer. We install and operate [power plants](#) and we charge our customers both for providing the generating capacity, and for the electricity we produce. We design and manufacture equipment specifically for these requirements in our factory in Dumbarton, Scotland.

Recent customers include the [London 2012 Olympic and Paralympic Games](#), the [Ryder Cup](#) and [Cirque du Soleil](#) and the power utilities in over 50 countries including the UK, France, Ivory Coast, Mozambique, Indonesia, Bangladesh, Argentina, Venezuela, Chile, Brazil and the USA.

In 2013 we fulfilled almost 48,000 customers' assignments and 72% of those who responded to our research gave us a recommendation of 9 or 10 out of 10.
